

MANAGING THE SINGLE TOOTH IMPLANT

FROM EXTRACTION TO RESTORATION

New to implants? Or just looking to do better?

The replacement of a missing tooth with a dental implant is now standard treatment in both specialist and general practice settings. So what makes the difference between an average result and an exceptional, long-lasting treatment outcome ? This two day program will guide the clinician on all the relevant stages of single tooth implant treatment. From case selection and treatment planning, to removal of the tooth and ridge preservation, the making of surgical guides, impressions and finally abutment design and delivery of the crowns.

The possibilities of treatment with a fully digital workflow will also be presented.

What you will learn

- Proper case selection
- Atraumatic extraction
- Ridge Preservation procedures
- Surgical guides and selecting a surgeon
- Impression procedures
- Abutment design
- Soft tissue management
- Delivery of the crown

Dr Michael Mandikos
