

ONLAYS for Non Vital Teeth

WHEN TO USE POSTS, COMPOSITES, ONLAYS AND CROWNS

Everyone has heard that non-vital teeth are more “brittle” and that they “fracture more easily”, but is this true? Should all non-vital teeth be restored with crowns or can some be restored more conservatively – with onlays or even with direct restorations?

This 2-day program will present the current evidence base for restoring non-vital teeth. Specifically, Michael will address the correct use of posts and/or bonded cores, and the possibility of conservative options like onlays and direct composite restorations.

Onlay Workshop

Then, in the practical exercise, all attendees will learn the correct preparations for porcelain and gold onlays, and how to cement these restorations. Attendees will also practice the correct way to prepare and place a post.

Price: **\$3490+GST**

Date: **22nd & 23rd July 2022**

**Australian Dental
Centre of Excellence**

154 Ipswich Road Woolloongabba,
Brisbane 4075

Dr Michael Mandikos

What you will learn:

- Important facts about non-vital teeth
- When to use a post
- Which post – fibre, ceramic or metal
- Which teeth need crowns
- When can an onlay suffice
- How to prepare and cement porcelain onlays
- How to prepare and cement gold onlays
